Department of Computer Science

Chairperson: El-Hajj, Wassim M.
Professor: Turkiyyah, George M.
Associate Professors: Abu Salem, Fatima K.; Attie, Paul C.; El-Hajj, Wassim; Safa, Haidar H.
Assistant Professors: Dhaini, Ahmad; Elbassuoni, Shady; Jaber, Mohamad
Senior Lecturer: Jureidini, Wadi’ N.
Instructors: Bdeir, Mahmoud; Sidani-Bohsali, Hayat A.
Part-time Instructors: Aoude, Loa; El Hajj, Ahmad; Hamam, Mustafa; Makki, Fatima; Nassar, Mohamed; Ramadan, Salim; Ramlaoui, Hussam; Sharafeddin, Mageda; Sobh, Amine

The Department of Computer Science offers a program leading to the degree of Bachelor of Science (BS) in Computer Science. It also offers a program leading to the degree of Master of Science (MS) in Computer Science. For more information about the department visit http://www.cs.aub.edu.lb/.

BS in Computer Science
Mission Statement

The department of Computer Science prepares students for advanced study and professional careers in the dynamically changing world of computing and information technology. The BS program aims to produce graduates with a solid foundation in computing at both the theoretical and practical levels and who have the ability to design, build, and deploy sophisticated systems using current technologies in a broad array of areas. It also develops an appreciation of the transformative impact that computing has had on a wide variety of disciplines. Students are trained in quantitative reasoning, the use of fundamental principles and ideas (abstraction, modularity, data structures, algorithmics, computability, calculus, logic) for analysis and problem solving, and disciplined development of modern software systems. The department has vigorous research programs in graphics and multimedia, networking for security, high-performance computing, data mining and information retrieval, and software engineering and is committed to providing opportunities for students to get engaged in research in these areas.

Degree Requirements
To graduate with a BS in computer science, a student must finish:

University General Education Requirements

- English Communication Skills (6 credits), Arabic Communication Skills (3 credits)
- Humanities (12 credits), Social Sciences (6 credits), Natural Sciences (6 credits)
- Quantitative Thought (3 credits)
Major Requirements

- Computer science: CMPS 200, CMPS 205, CMPS 212, CMPS 213, CMPS 253, CMPS 255, CMPS 256, CMPS 257, CMPS 258, CMPS 272, CMPS 277, CMPS 299, and 9 additional credits in computer science courses numbered 230 and above.
- Mathematics: MATH 201, MATH 211 (or CMPS 211), MATH 218 (or 219), STAT 230 (or 233).
- Sciences: PHYS 228, PHYS 228L.

All prospective computer science majors are expected to complete CMPS 200, CMPS 205, MATH 201, MATH 211 or CMPS 211, and CMPS 212 in the sophomore year. Computer science majors are expected to complete CMPS 213, CMPS 253, CMPS 255, CMPS 256, CMPS 257, and CMPS 258 in the junior year, and maintain an average grade of at least 70 in computer science courses. Students must have an average of 70 or more in CMPS 200 and CMPS 212 before they are allowed to enroll in CMPS courses numbered 230 and above.

A minor in computer science requires 18 credits: CMPS 200, CMPS 211, CMPS 212, CMPS 256, and 6 additional credits in computer science courses (CMPS) numbered 230 or above. A minimum of 9 credits must be taken in the department. [Note: This minor is not open to EECE students.]

Sample Study Plan

A typical study plan could have the following distribution of CMPS courses:

First Year
- First Semester: CMPS 200, CMPS 211
- Second Semester: CMPS 205, CMPS 212, CMPS elective

Second Year
- First Semester: CMPS 213, CMPS 255, CMPS 256
- Second Semester: CMPS 253, CMPS 258, CMPS 277

Third Year
- First Semester: CMPS 257, CMPS 272, CMPS elective
- Second Semester: CMPS 299, CMPS elective

Course Descriptions

CMPS 101 Introduction to Computer Science 2.2; 3 cr.
This course introduces the skills, concepts, and capabilities needed for effective use of information technology (IT). It includes logical reasoning, organization of information, managing complexity, operations of computers and networks, digital representation of information, security principles, and the use of contemporary applications such as effective Web search, spreadsheets, and database systems. Also it includes a basic introduction to programming and problem solving through scripting web applications. Every semester.
CMPS 200  Introduction to Programming  3.3; 3 cr.
An introduction to a disciplined approach to computer programming and problem solving, utilizing a block-structured high level language, with an emphasis on procedural abstraction and good programming style. This course covers the basic repetition and selection constructs, procedures and functions, parameter passing, and scope of variables. *Every semester.*

CMPS 205  Introduction to Computing Systems  1.2; 1 cr.
This course provides a broad introduction to computer science. It is meant to expose students to some of the ideas of the field as well to develop fluency in the use of information technology. The course introduces operations of computers and networks, World Wide Web and standards, systems for representing and organizing information, management of complexity, security principles and algorithmic thinking. *Annually.*

CMPS 206  Computers and Programming for the Arts  2.2; 3 cr.
This course is an introductory computer course that presents computing and information, and illustrates their use. The student is introduced to computers and their role in society with emphasis on conceptual understanding as well as operational proficiency. Topics include principles of computer operations both from the hardware and software perspectives, basic networking concepts, web authoring concepts including HTML, cascading style sheets, and publishing, and data manipulation using spreadsheets. This course is meant to be a computer literacy course open to Arts students only. *No credit is given to computer science majors. Students can get credit for only one of CMPS 206 or CMPS 209. Annually.*

CMPS 207  Programming for Digital Art  3.3; 3 cr.
This course introduces students to the technical and conceptual skills necessary for developing web sites and making algorithmic computer art. In web design, students will learn HTML and CSS. In computer art, students will learn to code using Processing with an emphasis on interactivity, simulation, and game design. However, the core skills learned in this course will be applicable to most programming languages. *Not open to computer science students. Annually.*

CMPS 209  Computers and Programming for the Sciences  2.2; 3 cr.
This course is designed to cover the essential computer skills needed by students in sciences and business majors. The course introduces how computers and Internet technologies work by emphasizing conceptual understanding as well as practical operational proficiency. Specifically, the course covers the essential concepts needed for designing spreadsheet applications, building personal relational databases, and programming using Visual Basic. Other topics covered include networking basics and web authoring using HTML. *No credit is given for computer science majors. Students can get credit for only one of CMPS 206 or CMPS 209. Every semester.*

CMPS 211  Discrete Structures  3.0; 3 cr.
This course introduces students to discrete structures, focusing on those relevant to computing sciences. Topics covered include Logic and Proofs, Sets, Sequences, Functions, Growth of Functions, Algorithms and their complexities, Induction and Recursion, Counting, and Recurrence Relations. *This course is equivalent to MATH 211. Annually.*
CMPS 212  Intermediate Programming with Data Structures  3.3; 3 cr.
A continuation of CMPS 200, this course consolidates algorithm design and programming
techniques, emphasizing large programs. This course also provides a detailed study of data
structures and data abstraction, and an introduction to complexity considerations and program
verification. Prerequisite: CMPS 200. Every semester.

CMPS 213  C/C++programming  1.2; 1 cr.
This course exposes students to the C and C++ programming languages. The course covers basic
syntax, defining structures and classes, I/O, pointers, arrays, memory management, references,
overloading, templates, the Standard Template Library, inheritance and polymorphism.
Annually.

CMPS 230  Digital Media Programming 3.0; 3 cr.
The class is an introduction to digital media programming and processing. The course explains
the essential technology behind images, animations, sound, and video and how to write
interactive programs that manipulate these media in creative ways. The class assumes basic
knowledge in Java or a first course in programming. Prerequisite: CMPS 200.

CMPS 251  Numerical Computing 3.1; 3 cr.
Techniques of numerical analysis: number representations and round-off errors, root finding,
approximation of functions, integration, solving initial value problems, Monte-Carlo methods.
Implementations and analysis of the algorithms are stressed. Projects using MATLAB or a
similar tool are assigned. Prerequisites: CMPS 200 or EECE 230, and MATH 201. This course is
equivalent to MATH 251. Annually.

CMPS 253  Software Engineering 3.0; 3 cr.
A course that introduces the fundamentals of software engineering, with emphasis on the
requirements elicitation and specification, and analysis and design phases of the software life
cycle. Specifications are given as a set of operations (with pre- and post-conditions), and using
a generic data model, and the design as a module dependency diagram where both data and
procedural decomposition are emphasized. The course also introduces verification and testing
of a design with respect to its specification, and the use of modularity and decomposition to
ensure tractability of the verification. Students will apply the concepts learned to develop a
software system. Prerequisite: CMPS 212. Annually.

CMPS 255  Computer Architecture 3.0; 3 cr.
A structured overview of the fundamentals of designing digital computer systems. Topics
covered include digital logic and systems, machine level representation of data, assembly level
machine organization, memory system organization and architecture, CPU implementation and
virtual machines, and exposure to one or more micro/mini architectures. Prerequisites: CMPS
211 and CMPS 212. Annually.

CMPS 256  Algorithms and Data Structures 3.0; 3 cr.
A systematic study of algorithms and their complexity. Topics include techniques for designing
efficient computer algorithms, proving their correctness, and analyzing their complexity; as
well as advanced searching, sorting, selection, graph and matrix algorithms. Prerequisites:
CMPS 211 and CMPS 212. Annually.
CMPS 257  Theory of Computation  
A course that covers basic theoretical principles embodied in automata and grammars. Topics include regular expressions, finite automata, context-free grammars and parsing, pushdown automata, closure properties, Turing machines, Church’s thesis, reductions and decidability. This course also provides a quick introduction to complexity theory. **Prerequisites:** CMPS 211 and CMPS 212. Annually.

CMPS 258  Programming Languages  
A course on the principles and programming styles that govern the design and implementation of contemporary programming languages, a history and overview of programming languages, fundamental issues in language design, and an introduction to language translation. This course focuses on design issues in imperative, object-oriented, functional, and rule-based paradigms. This last paradigm will be used to introduce intelligent systems issues. Languages such as C, C++, Haskell, and Prolog are used to illustrate key concepts. **Prerequisite:** CMPS 212. Annually.

CMPS 272  Operating Systems  
This course provides an introduction to the fundamentals of operating system function, design, and implementation. It contains a theory component about the concepts and principles that underlie modern operating systems, and a practice component to relate theoretical principles with operating system implementation. The course divides into three major parts. The first part of the course discusses concurrency (processes, threads, scheduling, synchronization, and deadlocks). The second part of the course discusses memory management (memory management strategies and virtual memory management). The third part of the course concerns file systems, including topics such as secondary storage systems and I/O systems. If time permits, the following topics will be briefly examined: virtualization, security, distributed synchronization, and perhaps other topics. A case study of a contemporary operating system like UNIX accompanies the course. **Prerequisites:** CMPS 213, CMPS 255 and CMPS 256. Annually.

CMPS 273  Systems and Network Programming  
This course focuses on the programming aspects of networking protocols. Topics include: designing and building programming applications that use computer networks, fundamental concepts required to build iterative and concurrent client/server networking applications using sockets. Then it moves to explain low level networking programming and other advanced socket topics. The course also presents the emerging peer-to-peer computing along with some tools needed to develop P2P applications. **Prerequisite:** CMPS 272. Annually.

CMPS 274  Compiler Construction  
A course that covers syntax specifications of programming languages, parsing theory, top-down and bottom-up parsing, parser generators, syntax-directed code generation, symbol table organization and management, dynamic storage allocation, code optimization, dataflow analysis, and register allocation. **Prerequisites:** CMPS 255, CMPS 258 and CMPS 257. Biennially.

CMPS 277  Database Systems  
An overview of the nature and purposes of database systems and an introduction to data modeling: entity relationship model, relational model with relational algebra, relational calculus and SQL; integrity constraints; file organization and index files; normalization. **Prerequisite:** CMPS 256. Annually.
CMPS 278  Web Programming and Design  3.0; 3 cr.
This course introduces the fundamentals needed to program on the Internet, and the state of the
art technologies used in designing and developing rich multi-tiered web based applications. It
presents the basics of client-side/server-side web programming and the skills and tools needed
to create dynamic Web-based applications. It provides in-depth coverage of various markup
languages (XHTML, Dynamic HTML and XML) and their associated cascading style sheets,
several client side and server side scripting languages (JavaScript, PHP) in addition to AJAX-
enabled rich Internet applications, client-side technologies, web services, Web Servers, and
multi-tiered applications using relational database systems. Prerequisite: CMPS 200. Annually.

CMPS 281  Numerical Linear Algebra  3.0; 3 cr.
A course on direct and interactive methods for solving general and special systems of linear
equations, covering LU decomposition, Choleski decomposition, nested dissection, marching
algorithms; Jacobi, Gauss-Seidel, successive over-relaxation, alternating directions, and
conjugate gradient iterative methods. This course is equivalent to MATH 281. Prerequisites:
MATH 218 or 219; and MATH 251 or CMPS 211. Annually.

CMPS 282  Advanced Software Engineering  3.0; 3 cr.
A course on state of the art software engineering for large distributed and concurrent systems.
Fundamental principles and concepts for specifying, designing, analyzing, implementing, and
testing such systems. Concurrent object oriented paradigms. Design patterns. Use of tools.
Documentation using both formal and informal descriptions. Students will develop at least one
large software system as part of the course. Prerequisite: CMPS 253. Annually.

CMPS 284  Computer Networks  3.0; 3 cr.
An introduction to network architectures and protocols, placing emphasis on Internet design
principles and methodology. Specific topics include application layer protocols, network
programming, transport protocols, circuit switching and packet switching, routing algorithms,
multicast, local and wide area networks, error detection and correction, and performance
evaluation. Prerequisite: CMPS 255. Annually.

CMPS 285  Computer Graphics  3.0; 3 cr.
A course that covers the practice of, and underlying mathematical foundation for, interactive
graphics programming. Topics include basic graphics systems, graphics primitives and
attributes, windows and viewports, clipping, geometric transformations, color systems,
2D texture mapping, and introduction to 3D graphics. Programming in OpenGL will be used.
Prerequisite: CMPS 212. Annually.

CMPS 286  Computer-Aided Geometric Design  3.0; 3 cr.
A course that discusses the representation of free-form curves and surfaces in modeling
objects by computers, including curve approximation and interpolation, spline curves (Bezier
and B-splines), visual smoothness of curves, geometric continuity, parameterization of curves,
introduction to surface interpolation and approximation, and spline surfaces (Bezier and
B-splines). Prerequisite: CMPS 212. Biennially.
CMPS 287  Artificial Intelligence  3.0; 3 cr.
An introduction to the principles and techniques that enable computers to behave intelligently. This course covers basic problem solving methods, knowledge representation, reasoning methods, learning from samples and from experience, expert systems and knowledge acquisition, machine learning, and neural networks. Several projects are given, some of which are in Prolog. Prerequisites: CMPS 256 and CMPS 258. Annually.

CMPS 288  Internals of Database Management Systems  3.0; 3 cr.
A course on the internals of database management systems, especially relational DBMS. Topics include query processing and optimization, transaction processing, concurrency control, recovery, distributed transactions, database security, client-server, multi-tier architectures, and web deployed database systems. Prerequisite: CMPS 277. Annually.

CMPS 289  Human Computer Interaction  3.0; 3 cr.

CMPS 296  Computer Science Tutorial  1–3 cr.
Prerequisite: Senior standing.

CMPS 297  Special Topics in Computer Science  1–3 cr.
A course on selected topics which change according to the interests of the instructors and/or students. Topics are chosen from state-of-the-art innovations in software and computer information systems. Prerequisite: Consent of instructor. Annually.

CMPS 299  Software Graduation Project  3 cr.
A course to enhance students' skills with practical experience giving them the opportunity to integrate knowledge accumulated in different courses. In this course, students must deliver a software product, which passes through the design, analysis, implementation, testing, and evaluation stages. Prerequisites: CMPS 253, CMPS 272, CMPS 277, and senior standing. Annually.
